Dear Dr. Jim,

Attached is the full November 2019 Mold Report; the property was recently remediated with significant demolition. The hygienist who performed this report is completing a new report after demoliton, and the amounts of mold were dramatic.

They had been growing since February 2019....and all known water saturated walls were NOT demolished or remediated until March 2019.

[Multiple air quality tests since June 2019 were performed, and it finally evidenced the un-demolished walls as the sources of mold contamination. (see diagram below- blue areas not demolished or remediated.

Additional reports are attached, and I will bring with me the 'mold count' pages . At a glance, in addition to the November report mold species of:

Aspergillus
Penicillin
Chaetomium
Fusarium
Ulocladium
Stachybotrys

The additional reports done since March 2019 also include these species

11/12/19
 Ascospores
 Myxomycetes
 Alternaria
 Basidiospores
 Stachbotrys/Memnoniella
 Bioplaris
 Scopulariopsis/Microascus
 Zygomycetes

9/23/2019
 Penicillium/Aspergillus
 Cladosporium
 Alternaria
 Basidiospores
 Ascospores
 Smuts, Periconia, Myxomycetes
 Hyphal Elements

8/2019
 Aspergillus/Penicillium
 Ascospores
 Basidiospores
 Cladosporium
 Periconia/Myxo/Smuth
 Chaetomium

Torula

7/15/19

Altermaria

Ascospores

Aspergillus/Penicillium

Cladosporium

Pithomyces

Stachbotrys/Memnoniella

3/18/19

This report was 3 rooms, sampled twice, 3/17 & 18 (suspicious) and final reports shows outdoors only Cladosporium and Odium;

Indoors shows no contamination other than Background debris, hyphal fragments, pollen, skin cells. Same company performed the 8/20/19

full-house report that also required an addendum to explain their Unacceptable* air quality readings with no recommendations for remediation other than surface cleanings.

It was THIS report that gave the green light for build-back, and upon which the insurance company has put life at risk, and ruined my home, as it looks today.

Reviewing the series of reports certainly tells a fresh story and while I have no real idea of what all the types of molds are, or their consequences, it sure looks like the 'readers in white coats' could conveniently miss a few spores if they are working on behalf of an insurance company, relying heavily on a defense of plausible deniability.

It has taken me this long (since June 2019) to even begin to fathom the extent of damage and harm, and how to begin to look at this reports.

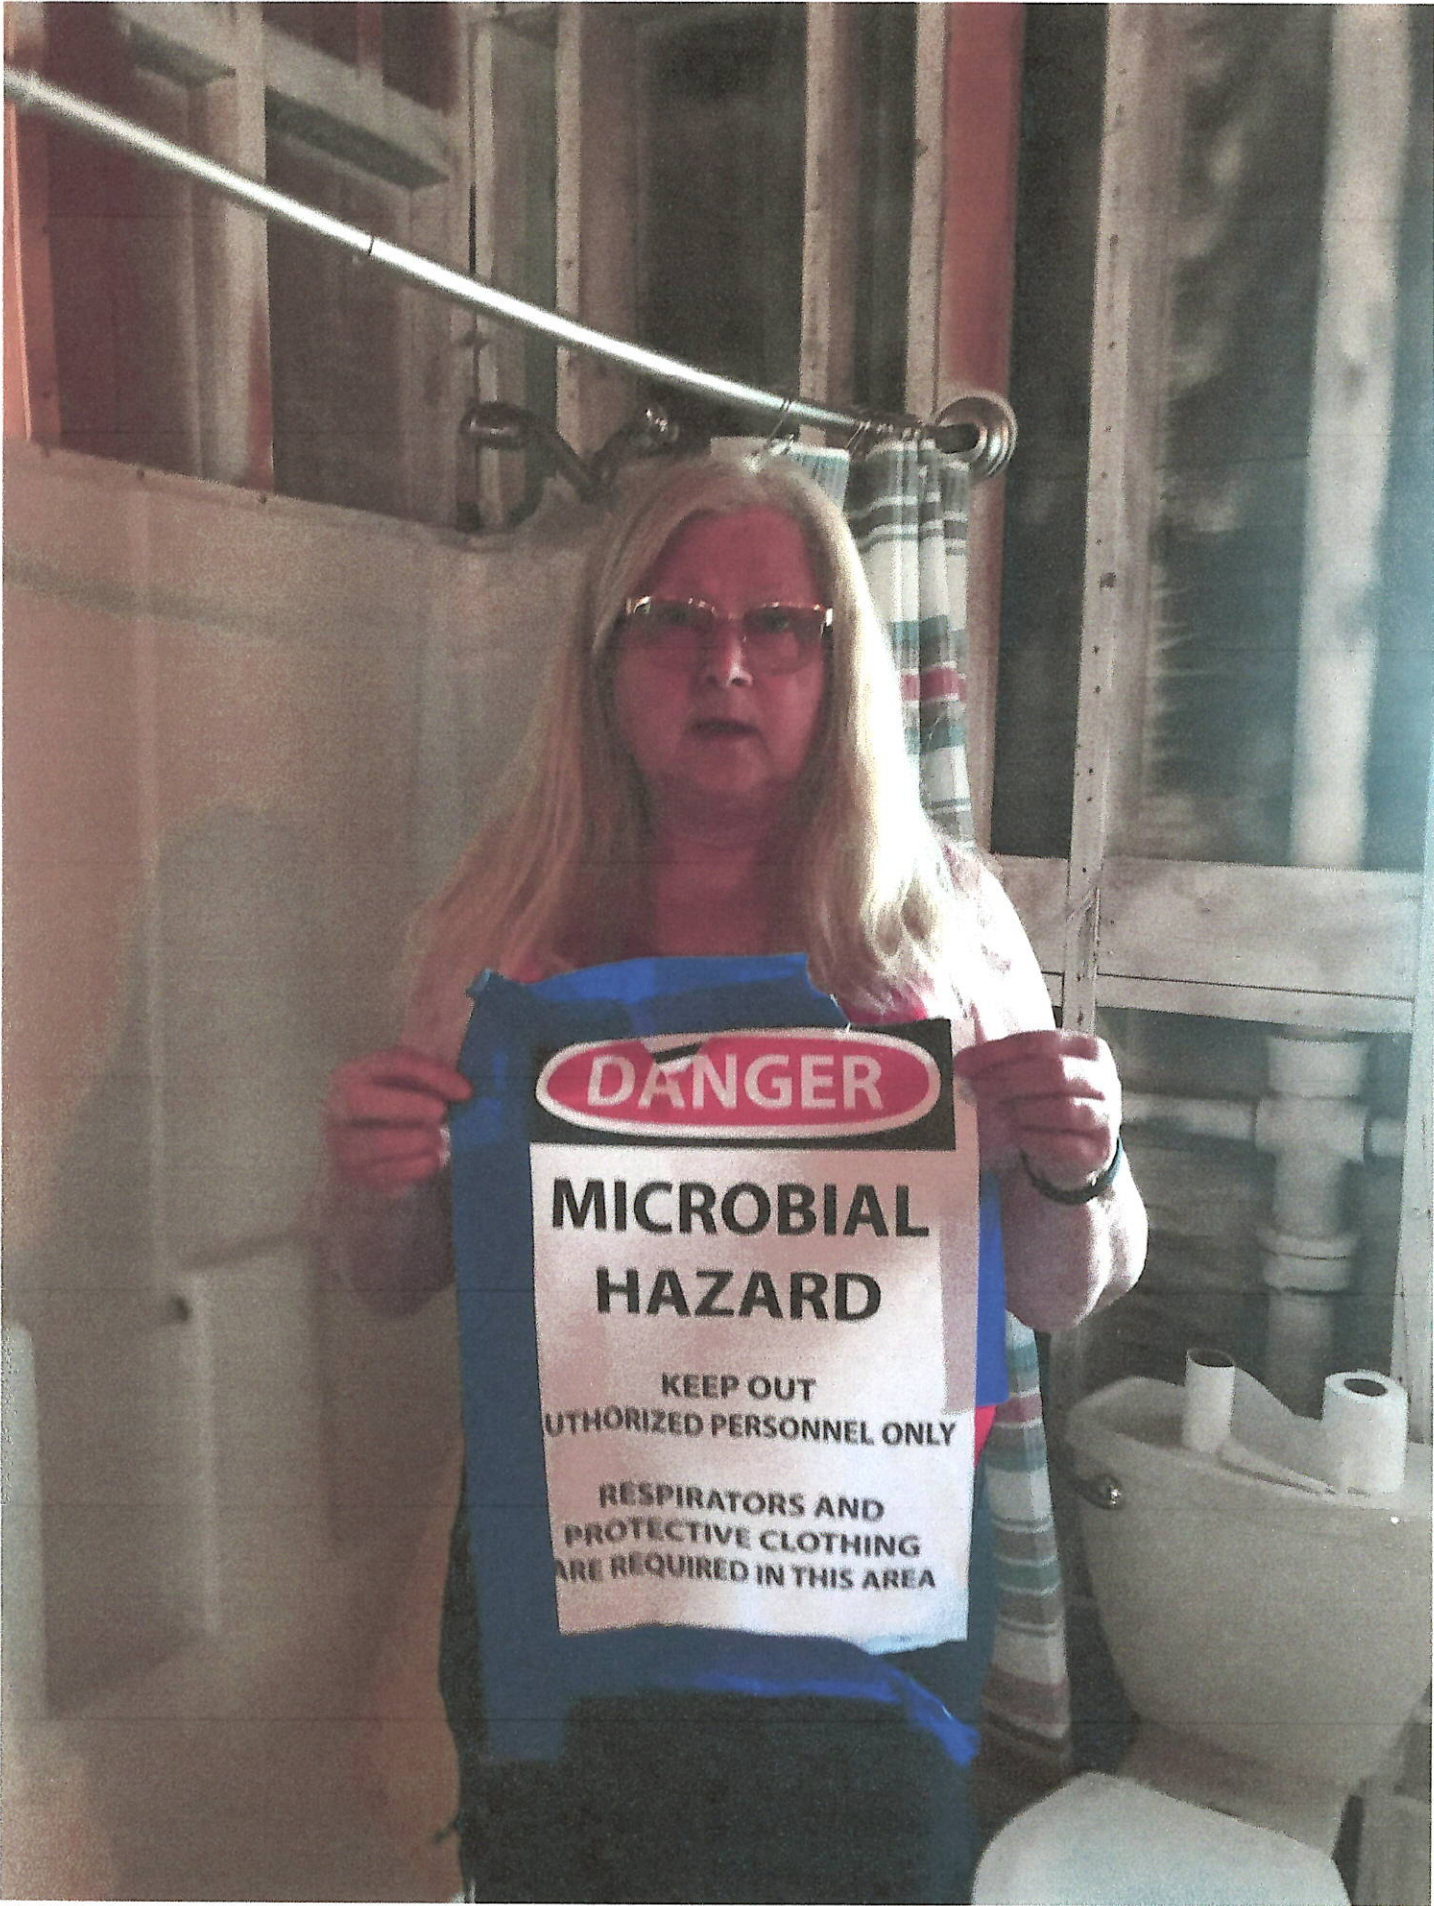

If I can be of any assistance to you in your further rearch, and perhaps others who may know what's going on but need more tangible proof, I hope we can expore those med/legal possibilities as well. I am also quite interested in learning more about the positive or negative charge of mold, and the varies species, and the "locks" and 'keys to unlocks'

PS I do have a BRAIN INJURY (or, as they like to say now, " a history of brain injuries" --- I am injured, not stupid. :/

See you shortly.

Many thanks, Dr Jim -- I look forward to our appointment.

Kind regards,
Linda Ayres
